SUMMARY

- Full-Stack Developer specializing in building scalable backend systems and AI-integrated applications.
- Experienced in designing REST APIs, real-time systems, and RAG-based AI pipelines for developer-focused tools.

TECHNICAL SKILLS

Backend & Systems: Node.js, Express.js, MongoDB, REST APIs, Socket.io, JWT, RBAC, Mongoose

AI / ML: RAG Pipelines, Vector Embeddings, Google Gemini AI, AST Parsing (Babel)

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, Framer Motion, React Flow

Languages: JavaScript (ES6+), TypeScript, Python, C++, HTML/CSS

Tools: Git, GitHub, Postman, Vercel, Render

EXPERIENCE

- **Housitize** Remote
Full-Stack Developer Intern Sept 2025 – Mar 2026
 - Architected scalable backend-driven modules for real estate and e-commerce platforms using **Next.js 14** and **MongoDB**, supporting high concurrent user traffic.
 - Designed and implemented **30+ RESTful APIs** with optimized database queries and indexing strategies for high-performance data access.
 - Built an enterprise-grade admin system with **RBAC** and automated workflows, improving operational efficiency.
 - Improved performance by **30%** through SSR, lazy loading, and backend optimization techniques.
- **Freelance Full-Stack Developer** Remote
Part-Time May 2024 – Present
 - Delivered end-to-end web applications, handling system design, backend architecture, and frontend implementation.
 - Implemented secure authentication and authorization systems using **JWT** and session management.
 - Optimized application performance by **35%** via caching, code splitting, and middleware strategies.
- **Shiga** Remote
Web Development Intern Aug 2023 – Oct 2023
 - Developed responsive UI components using React while ensuring cross-browser compatibility and performance.
 - Collaborated with design teams to translate Figma designs into production-ready interfaces.

PROJECTS

- **RepoMind – AI Code Intelligence Platform** GitHub
Next.js, Node.js, MongoDB, Gemini AI, RAG, AST Parsing
 - Developed an AI-powered system that converts any GitHub repository into a queryable knowledge base using **RAG architecture** and semantic vector search.
 - Designed a backend pipeline for embedding generation, context retrieval, and multi-turn conversational responses with high relevance.
 - Implemented **AST-based code analysis** to extract structural relationships, enabling intelligent code understanding and visualization.
 - Built a streaming chat system with context injection from top relevant code segments, improving response accuracy and developer productivity.
- **Real-Time Chat System** GitHub
Node.js, Socket.io, MongoDB, React
 - Engineered a scalable real-time communication system using WebSockets with state persistence and presence tracking.
 - Implemented secure authentication and protected routes using JWT-based middleware.
 - Designed low-latency messaging architecture ensuring reliable and efficient data flow.

EDUCATION

- **Bharati Vidyapeeth College of Engineering** Pune, India
B.Tech in Electronics and Communication Engineering; CGPA: 8.0/10 July 2020 – April 2024
